

## VIBRATION TRANSMITTER

# TR-P

### FUNCTION

The integrated transmitter TR-P measures the absolute vibrations of any rotating machine support and it is able to interface directly in 2 wires technique (current loop 4÷20 mA) to an acquisition system (PLC or DCS).

### GENERAL DESCRIPTION

The transmitter, secured directly on machinery, generates an electric signal (4÷20 mA) which is proportional to vibration velocity or acceleration. The transmitter is made of a stainless steel basis AISI 316L with machine connection thread and a polyamide molded body; the connection to the acquisition system is effected by means of a TE CONNECTIVITY SUPERSEAL connector. The peculiar characteristics of the polyamide construction and of the connection allow unique resistance to extreme ambient conditions, enabling an IP67 protection degree.

**NOTE:** The transmitter is available in different configuration versions and it does not need any set-up or maintenance.
